

Cleaning and Maintaining Guide F91 Range

Hand Washing

This is an effective, albeit tedious way to clean baffle grease filters. Follow these steps to clean a filter by hand:

For your safety, ensure filters are a cool temperature prior to handling.

- Remove filter from the hood safely using a baffle filter removal tool, or by hand.
- Place the filter in a sink filled with hot, soapy water.
- Scrub with a non-abrasive sponge or scrubber. Avoid bleach and other harsh chemicals, since they can corrode the metal.
- Dry the filters immediately after and reinstall them in the hood.

Dishwashing

Save time by cleaning filters in the dishwasher. Follow these steps:

For your safety, ensure filters are a cool temperature prior to handling.

- Remove filter from the hood safely using a baffle filter removal tool, or by hand.
- Fill the soap compartment the way you would if running a load of dishes. To avoid corrosion, never use bleach or harsh cleansers.
- Make sure all residue is removed from the filter after the washing cycle is complete.
- Dry the filter completely and reinstall it in the hood.
